

Despite stormy times, the structured products industry has continued to develop. The transparency efforts on the part of the SSPA - Swiss Structured Products Association - represent a central point. The SSPA Swiss Derivative Map published by the association has provided an overview of the most important product types since 2006. Together with the latest map, the third edition of the work «World of Structured Products», which was published in cooperation with the Swiss Derivative Institute, has now been published.

«Structured Products are an enhancement for every portfolio. This book helps you to discover and better exploit the potential of Structured Products and make better use of them.»

Markus Pfister, President SSPA
